What is the best approach for reducing environmental impact? Often we consider how to minimize the negative impacts, for instance by reducing waste. This short book lays out a new perspective that is both simple and compelling. Reduce the mass of the inputs. It takes the idea a step further; do not stop at reducing the mass of existing products, think instead of delivering the benefit - the "naked value" - through new technologies. The book is short and clearly written, plus it has questions

at the end of each chapter for self-study. I would recommend it for everyone who is concerned about the environment as well as those who are interested in the business of innovation. I heard Howard Brown deliver a fascinating lecture on the matter and would also recommend him as a seminar leader. The only reason I did not give the book five stars is because the concept is perhaps too simplistic for some situations and it tends to gloss over the critical subject of human psychology.

This is one of the most important books any business manager can read right now. Resource availability is looming on the horizon as a critical business need. This book describes why and how forward-looking managers can strategically prepare -- and does so succinctly and interestingly. Object of the game: shift your thinking from waste management to waste prevention, and manage resource use through innovation. Well done, Howard and team.

This book provides an immediately applicable approach to understanding value in a global context of increasingly constrained material resources and an exploding population demanding ever more products and services. It's a smart, quick, informative catalyst. No fluff.

This book analyzes the concept of product value in an entirely different and very thought-provoking way. The authors' concepts will force you to completely rethink why consumers buy what they buy and just how subject to disruption almost every company's business model really is. This is a must read for company executives as well as investors. Right now, someone somewhere is working on a way to deliver the same value your product or the products of the companies you are invested in deliver, but in an entirely new way. That new way will use dramatically fewer resources for production and delivery, will be faster, better and cheaper and has the potential to make your product the next typewriter, carbon paper or photographic film. Wow!
